

# Fully Managed Device

## Zero Trust, Always On Protection & Performance for Every Endpoint

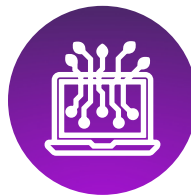

This service delivers comprehensive management and security for desktops, laptops, and mobile devices. From deployment to decommissioning, your devices are always updated & always defended.

### Included as Standard:

#### Zero Trust Application Control with ThreatLocker

We deploy ThreatLocker to enforce a strict zero trust by default approach. Blocking all unauthorised applications & preventing lateral movement, ransomware and zero-day attacks.

#### Automated Patch and Software Management

Timely deployment of Operating System (OS) and third-party application updates across your infrastructure to reduce chances of zero-day exploits and provide timely fixes to known faults.

#### 24/7 Monitoring and Automated Self-Healing

Continuous endpoint health checks and automated self-healing helps to keep on top of system errors and potential failures, reducing downtime.

#### Compliance Hardening and Regulation Auditing

Full-disk encryption, secure boot, policy enforcement, and device configuration and alignment with regulatory standards keeps your business ahead of UK cyber security regulations and standards.

#### Device Lifecycle Management

Asset procurement and inventory management, paired with warranty tracking and secure end-of-life processing ensures that you will never be left behind by hardware that is not fit for purpose.

#### Threat Intelligence Integration

Our Security Operations Centre isolates and enhances traditional local threat models, providing a deeper spread of cyber threat monitoring across your infrastructure and minimising impact of potential unauthorised access

## Backed by our 24/7/365 Security Operations Centre

#### Endpoint Behavioural Monitoring

Real time endpoint and network remotely monitored for unusual, suspicious and malicious activity, as well as policy deviations to block potential threats as they happen.

#### Penetration Testing and Threat Hunting

Even with global intelligence feeds, and automated monitoring, cyber criminals will always attempt to bypass your security. Our penetration testing and threat hunting services patch potential weak points and prevent breaches.
